Summary

I'm currently Project Managing on the OH-STAR project. In this project we're setting out to assess risk factors for acquisition and selection of antibiotic resistance in companion and farmed animals and implications for transmission to humans.

I am a member of UoB's AMR Force - The University of Bristol School Vet Science's interdisciplinary working group actively researching key topics around veterinary antimicrobial resistance. We are always keen to expand our party of interested collaborators for our discussion group, so get in contact!
